RE: Low Pressure Air Testing of the MAXADAPTOR® Coupling

Today we performed low pressure air testing on two pipe combinations, utilizing the MAXADAPTOR® Coupling to transition between the pipe materials. The testing was conducted at Gripper Gasket LLC, Corona, California. The pipe combinations tested are as follows:

1. 6" VCP to 6" SDR 35
2. 12" VCP to 12" PVC

Testing parameters were 5.0 PSI for 30-minutes (1,800 seconds). These parameters far exceed those of Greenbook 2018. Both tests were 100% leak free.

Please contact me if I can provide any additional information.

Best regards,
